JVC

SPECIFICATIONS

Item	Content
Dimensions (W×H×D)	14-5/8"×12-5/8"×14-3/8" / 37.0cm×31.9cm×36.5cm
Weight	20.9lbs / 9.5kg
GND	Only LIVE GND
TV System and Color system	
TV RF System	CCIR (M)
Color System	NTSC
TV Receiving Channels and Frequency	
VL Band	(02 ~ 06) 54MHz ~ 88MHz
VH Band	(07 ~ 13) 174MHz ~ 216MHz
UHF Band	(14 ~ 69) 470MHz ~ 806MHz
CATV Receiving Channels and Frequency (Quartz Synthesizer system)	
Low Band	(02 ~ 06,A-8) by (02 ~ 06&01)
High Band	(07 ~ 13) by (07 ~ 13)
Mid Band	(A ~ 1) by (14 ~ 22)
Super Band	(J ~ W) by (23 ~ 36)
Hyper Band	(W+1 ~ W+28) by (37 ~ 64)
ULTRA Band	(W+29 ~ W+84) by (65 ~ 125)
Sub Mid Band	(A8,A4 ~ A1) by (01,96 ~ 99)
TV/CATV Total Channel	180 Channels
Intermediate Frequency	
Video IF Carrier	45.75MHz
Sound IF Carrier	41.25MHz (4.5MHz)
Color Sub Carrier	3.58MHz
Antenna Input Impedance	75Ω (VHF/UHF) Terminal,F-Type Connector
Power Input	120V AC,60Hz
Power Consumption	80W(US)
Input Current	1.1A(CA)
Picture Tube	13"(33cm) In-Line Type Tint Tube
Viewable Picture Size (W×H)	11-1/8"×8-5/16" / 28.1cm×21.1cm
High Voltage	24.0kV ± 1kV (at zero beam current)
Speaker	3-3/16"(8cm) Round Type, 8Ω
Audio Power Output	1.2W
Tube	1
IC	16 (In TV), 1 (In REMOCON)
Transistor	27 (In TV), 2 (In REMOCON)
Remote Control Unit	RM-C428 (C-13CL4) RM-C428W (C-13WL4)

Design & specification subject to change without notice.

FEATURES

- New chassis design enables use of a single board with simplified circuitry.
- Provided with miniature tuner (TV/CATV).
- PLL synthesizer system TV/CATV totaling 180 channels.
- Deletion of user VR by master command and increased features possible simultaneously.
- Multifunctional remote control permits picture adjustment.
- Adoption of the CHANNEL GUARD function prevents the specific channels from being selected, unless the "ID number" is key in.
- Adoption of the AV STATUS function that can store 2 variations for preset picture adjustment, to change the picture tone to your preference.
- Adoption of the HOME SITTER function enable to be turned on and off automatically at present times everyday.
- ON/SLEEP TIMER for setting in real time.
- With 75Ω V/U in common (F-Type) ANT Terminal.

PACKING

PACKING PARTS LIST

△ Ref.No.	Part No.	Part Name	Description	Local
1	CP10974-037-H	PACKING CASE	(C-13CL4(US))	
1	CP10974-038-H	PACKING CASE	(C-13WL4(US))	
1	CP10974-039-H	PACKING CASE	(C-13CL4(CA))

SAFETY PRECAUTIONS

1. The design of this product contains special hardware, many circuits and components specially for safety purposes. For continued protection, no changes should be made to the original design unless authorized in writing by the manufacturer. Replacement parts must be identical to those used in the original circuits. Service should be performed by qualified personnel only.
2. Alterations of the design or circuitry of the products should not be made. Any design alterations or additions will void the manufacturer's warranty and will further relieve the manufacturer of responsibility for personal injury or property damage resulting therefrom.
3. Many electrical and mechanical parts in the products have special safety-related characteristics. These characteristics are often not evident from visual inspection nor can the protection afforded by them necessarily be obtained by using replacement components rated for higher voltage, wattage, etc. Replacement parts which have these special safety characteristics are identified in the parts list of Service manual. **Electrical components having such features are identified by shading on the schematics and by (▲) on the parts list in Service manual.** The use of a substitute replacement which does not have the same safety characteristics as the recommended replacement part shown in the parts list of Service manual may create shock, fire, or other hazards.
4. **Use isolation transformer when hot chassis.**
The chassis and any sub-chassis contained in some products are connected to one side of the AC power line. An isolation transformer of adequate capacity should be inserted between the product and the AC power supply point while performing any service on some products when the HOT chassis is exposed.
5. **Don't short between the LIVE side ground and NEUTRAL side grounding or EARTH side ground when repairing.**
Some model's power circuit is partly different in the GND. The difference of the GND is shown by the LIVE (⊥) side GND, the NEUTRAL (⎓) side GND and EARTH (⊕) side GND. Don't short between the LIVE side GND and NEUTRAL side GND or EARTH side GND and never measure with a measuring apparatus (oscilloscope etc.) the LIVE side GND and NEUTRAL side GND or EARTH side GND at the same time.
If above note will not be kept, a fuse or any parts will be broken.
6. If any repair has been made to the chassis, it is recommended that the B₁ setting should be checked or adjusted (See ADJUSTMENT OF B₁ POWER SUPPLY).
7. The high voltage applied to the picture tube must conform with that specified in Service manual. Excessive high voltage can cause an increase in X-Ray emission, arcing and possible component damage, therefore operation under excessive high voltage conditions should be kept to a minimum, or should be prevented. If severe arcing occurs, remove the AC power immediately and determine the cause by visual inspection (incorrect installation, cracked or melted high voltage harness, poor soldering, etc.). To maintain the proper minimum level of soft X-Ray emission, components in the high voltage circuitry including the picture tube must be the exact replacements or alternatives approved by the manufacturer of the complete product.
8. Do not check high voltage by drawing an arc. Use a high voltage meter or a high voltage probe with a VTVM. Discharge the picture tube before attempting meter connection, by connecting a clip lead to the ground frame and connecting the other end of the lead through a 10k Ω 2W resistor to the anode button.
9. When service is required, observe the original lead dress. Extra precaution should be given to assure correct lead dress in the high voltage circuit area. Where a short circuit has occurred, those components that indicate evidence of overheating should be replaced. Always use the manufacturer's replacement components.
10. **Isolation Check**
(Safety for Electrical Shock Hazard)
After re-assembling the product, always perform an isolation check

on the exposed metal parts of the cabinet (antenna terminals, video/audio input and output terminals, Control knobs, metal cabinet, screwheads, earphone jack, control shafts, etc.) to be sure the product is safe to operate without danger of electrical shock.

- (1) **Dielectric Strength Test**
The isolation between the AC primary circuit and all metal parts exposed to the user, particularly any exposed metal part having a return path to the chassis should withstand a voltage of 1100V AC (r.m.s.) for a period of one second.
(. . . Withstand a voltage of 1100V AC (r.m.s.) to an appliance rated up to 120V, and 3000V AC (r.m.s.) to an appliance rated 200V or more, for a period of one second.)
This method of test requires a test equipment not generally found in the service trade.
- (2) **Leakage Current Check**
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.) Using a "Leakage Current Tester", measure the leakage current from each exposed metal part of the cabinet, particularly any exposed metal part having a return path to the chassis, to a known good earth ground (water pipe, etc.). Any leakage current must not exceed 0.5mA AC (r.m.s.).
• **Alternate Check Method**
Plug the AC line cord directly into the AC outlet (do not use a line isolation transformer during this check.). Use an AC voltmeter having 1,000 ohms per volt or more sensitivity in the following manner. Connect a 1,500 Ω 10W resistor paralleled by a 0.15 μ F AC-type capacitor between an exposed metal part and a known good earth ground (water pipe, etc.). Measure the AC voltage across the resistor with the AC voltmeter. Move the resistor connection to each exposed metal part, particularly any exposed metal part having a return path to the chassis, and measure the AC voltage across the resistor. Now, reverse the plug in the AC outlet and repeat each measurement. Any voltage measured must not exceed 0.35V AC (r.m.s.). This corresponds to 0.5mA AC (r.m.s.).

11. **High voltage hold down circuit check.**
After repair of the high voltage hold down circuit, this circuit shall be checked to operate correctly.
See item "How to check the high voltage hold down circuit".

■ ONLY CANADA

This mark shows a fast operating fuse, the letters indicated below show the rating.

OPERATING INSTRUCTIONS

■ The operating instructions are the same as for C-20BL4(US), C-20CL4(US&CA), C-20WL4(US) (No.50792). Therefore, please refer to the C-20BL4(US), C-20CL4(US&CA), C-20WL4(US) (No.50792) SERVICE MANUAL for detailed instructions.

NOTE : The on-screen display in CANADA model is shown in English only, no Spanish text is available.

Locations of TV Buttons and Parts

FRONT PANEL

- How to use the FUNCTION button:**
- Press this button to display a list of functions. While the list is being displayed, press the button again to select the desired function; then change the level or setting with LEVEL/CHANNEL (-/+).
 - Other buttons may be used by referring to the respective pages of this user guide for their description.

Note:

- Illustrations for front panels and rear panels used in this user guide are of C-13CL4/ C-13WL4. The panels of the other models are the same in layout and shape, but different in size.

MAIN PW BOARD ASS'Y (SGY1701A(H2)) [CA]

Regarding the parts list for the main PW board ass'y [SGY1701A(H2)] of the model for canada, only the different parts from those of the model [SGY1201A(H2)] are described. For further details regarding the other parts, refer to the parts list of the model [SGY1201A(H2)] described on page 18 through page 21.

Locations of Remote Control Buttons

MENU Selection

Most of the TV's functions can be selected with the remote control unit.

1. Press MENU. The function list will appear.
2. Press the corresponding number key to select a function.
3. A function can be set on the screen.

Note :

- When "9. INITIAL SET-UP" is selected, another function list will be displayed. Use the number keys to select a function.

SPECIFIC SERVICE INSTRUCTIONS

DISASSEMBLY PROCEDURE

REMOVING REAR COVER

Fig. A

1. Unplug the power supply cord and remove the six screws A shown in Fig.A
- * when reinstalling the rear cover, carefully push it inward after inserting the main PW board into the rear cover groove.

SETTING UP CHASSIS FOR CHECK/REPAIR

Fig. C

1. As shown in Fig.C, set the removed chassis upright.
- * When conducting a check with power supplied, be sure to confirm that the CRT earth wire is connected to the CRT socket board and the chassis..

REMOVING MAIN PW BOARD

Fig. B

1. Withdraw the PW board backward along the rail.(Fig.B)
- * When Conducting a check with power supplied, be sure to confirm that the CRT earth wire is connected to the CRT socket board and the chassis.

WIRE CLAMPING AND CABLE TIES

1. Be sure to clamp the wire.
2. Never remove the cable tie used for tying the wires together.
- Should it be inadvertently removed, be sure to tie the wires with a new cable tie.

SERVICE ADJUSTMENTS

TOOLS AND FIXTURES FOR
ADJUSTMENT

- DC VOLTMETER

NOTE

- Before commencing any adjustment, set the FUNCTION (BRIGHT, PICTURE, COLOR, etc.) to the standard LEVEL by pressing the RESET button on the remote controller.

ADJUSTMENT LOCATION

ADJUSTMENT

Item	Measuring instrument	Test point	Adjustment part	Description
B1 POWER SUPPLY	DC Voltmeter	TP-91		Connect a tester to TP-91 and TP-E (⊥) to check that the voltage is DC 129.3V. * The tester must have an internal resistance of 20kΩ/V or above.
NOISE (RF AGC)			NOISE VR (R135)	1. Turn the NOISE VR so that noise appear in the picture. 2. Then adjust the NOISE VR in the direction where noise disappears from the picture, and stop it where noise has disappeared from the picture. 3. Select another channel, and make sure that there occurs no trouble.
V. CENTER	PATTERN GENERATOR		V. CENTER SW (S401)	• The screen can be shifted vertically by changing the V. CENTER switch.
V HEIGHT & V. LINEARITY			V HEIGHT VR (R423) V LIN. VR (R426)	1. Receive a picture that enable vertical symmetry to be checked. 2. Turn the V HEIGHT VR to compress the picture vertically. 3. Adjust the V LINE. VR to where the picture is symmetrical top and bottom. 4. Again adjust the V HEIGHT VR to return the normal height.
FOCUS			FOCUS VR	1. Adjust the FOCUS VR to obtain clear pictures. 2. Check that pictures have been adjusted to optimum appearance in both central and periphcral areas of the screen.
COLOR SYNCHRONIZATION		IC101 (Pin ④) (Pin ⑤)	COLOR SYNC VR (R316)	1. Receive the color bar signal. 2. Connect pin ⑤ and ④ (9V line) of IC101 with 100Ω resistor . 3. Adjust the COLOR SYNC. VR to change the picture from color stripes to still color bar. 4. Remove 100Ω resistor and check that the color synchronization does not deteriorate on any of the channels.

EXPLODED VIEW

Item	Measuring instrument	Test point	Adjustment part	Description
SUB BRIGHT	Remote control unit		VSM SERVICE SWITCH (S710)	<ol style="list-style-type: none">By pressing AV STATUS / RESET button of the remote control unit, reset the respective functions (TINT, COLOR, PICTURE, BRIGHT, DETAIL)Turn VSM SERVICE SW (S710) to the S side.Select BR(BRIGHT) adjustment mode using FUNCTION KEY of the remote control unit and obtain an optimum brightness using the adjusting (+/-) key.After adjustment , return VSM SERVICE SW (S710) to the N side. <ul style="list-style-type: none">Avoid excessive brightness.
PICTURE	Remote control unit		VSM SERVICE SWITCH (S710)	<ol style="list-style-type: none">By pressing AV STATUS / RESET button of the remote control unit, reset the respective functions (TINT, COLOR, PICTURE, BRIGHT, DETAIL)Turn VSM SERVICE SW(S710) to the S side.Select PI(PICTURE) adjustment mode using FUNCTION KEY of the remote control unit and obtain an optimum contrast using the adjusting (+/-) key.After adjustment , return VSM SERVICE SW (S710) to the N side.
TINT &COLOR	Remote control unit		VSM SERVICE SWITCH (S710)	<ol style="list-style-type: none">By pressing AV STATUS / RESET button of the remote control unit, reset the respective functions (TINT, COLOR, PICTURE, BRIGHT, DETAIL)Turn VSM SERVICE SW (S710) to the S side.Select the TINT and COLOR controls with the remote control unit function keys. Use the (+/-) keys to adjust for the most natural color.After adjustment , return VSM SERVICE SW (S710) to the N side.
HORIZON-TAL LINE display			SERVICE SW (S251)	<ol style="list-style-type: none">Turning the SERVICE SW from the N side to the S side will bring the horizontal line display to the screen. <div><div><div>N</div><div>S</div></div><div><div>N : normal picture</div><div>S : will appear a H line</div></div></div>

HOW TO CHECK THE HIGH VOLTAGE HOLD DOWN CIRCUIT

1. HIGH VOLTAGE HOLD DOWN CIRCUIT

After repairing of the high voltage hold down circuit shown in Fig. 1.
This circuit shall be checked to operate correctly.

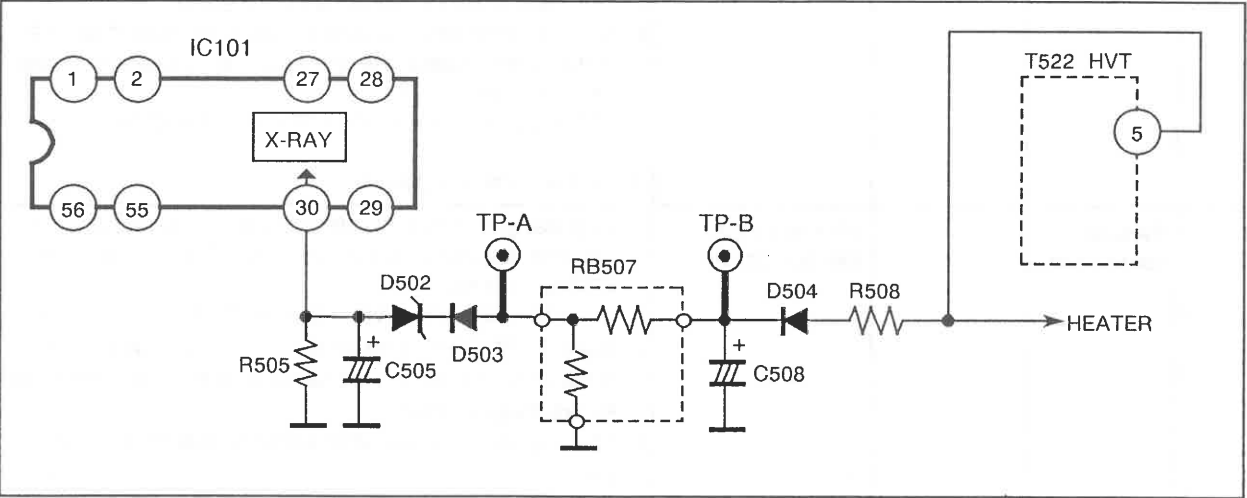

Fig. 1

Fig. 2

2. CHECKING OF THE HIGH VOLTAGE HOLD DOWN CIRCUIT.

- (1) Make sure that the power SW is at OFF.
- (2) As shown in Fig. 2, set the resistor 7.52kΩ 1/4W (between TP-A and TP-B).
- (3) Turn the power SW ON.
- (4) Make sure that the screen picture disappears.
- (5) Turn the power SW OFF.
- (6) Remove the resistor 7.52kΩ 1/4W from RB507 (between TP-A and TP-B).

PURITY, CONVERGENCE AND WHITE BALANCE

* The locations of SERVICE SWITCH, SCREEN VR, CUT-OFF VR and DRIVE VR are described in the ALIGNMENT LOCATION of SERVICE ADJUSTMENT or the SCHEMATIC DIAGRAM.

PICTURE TUBE

The picture tube is a precision in-line gun type. For this picture tube, dynamic convergence is carried out by a precision deflection yoke which eliminated the use of convergence yoke and convergence circuit. The adjustment of picture tube is therefore made easier as only the adjustment of static convergence by using a magnetic is enough. The deflection yoke and purity/convergency magnets assembly has been set at the factory and requires no field adjustments. However, should the assembly be accidentally jarred or tampered with, some or all adjustments may be necessary.

COLOR PURITY & VERTICAL CENTER

Loosen yoke retaining screw (Fig. B-1) . With a sharp knife cut between the picture tube and the wedge. Remove wedges completely and clean off dried adhesive from the picture tube. PAINT is used to lock the tabs of the purity/convergence magnet assembly in place (Fig. B-1) . The paint must be removed with the end of a screwdriver before any adjustments are attempted.

(As to models equipped with a magnet locking ring, beforehand loosen it.)

1. Select no signal UHF channel. (or Display a monochrome pattern)
2. Let the purity tabs come in line horizontally as is shown in Fig. B-2. A long tab should be in the same direction as the other short tab.
3. Move the yoke slowly backward.
4. Turn the GREEN CUT-OFF VR to maximum and the RED and BLUE CUT-OFF VRs to minimum. Then adjust the SCREEN VR so that the green band can be seen best. (Fig. B-3)
5. Rotate the two tabs in the opposite directions and with them kept at an angle, together in either direction so that the green band is centered on the picture tube.
6. Check the vertical center position by displaying a horizontal line. (Select the CUT-OFF SERVICE SWITCH from N to S and a HORIZONTAL LINE will appear.) Unless correct, bring it to the nearest center by rotating the two tabs, kept at an angle, together in either direction. (Fig. B-4)
7. Repeat steps 5 and 6 alternately until the green band and the vertical center come to the center.
8. Move the yoke slowly towards the bell of the tube so that the whole surface of the picture tube is filled with a green pure raster.
9. Turning RED or BLUE CUT-OFF VR to maximum and GREEN CUT-OFF VR to minimum, make sure of a red or blue pure raster.
10. Secure yoke retaining screw (do not install wedges at this time) .

(As to models equipped with a magnet locking ring, secure it and keep six magnets from moving even if it is touched slightly.)

STATIC CONVERGENCE & DYNAMIC CONVERGENCE

1. Connect a crosshatch generator to the input terminals and adjust BRIGHTNESS and CONTRAST control for a distinct pattern.
2. Adjust the convergence around the edges of the picture tube by tilting the yoke, up-down and left-right, and temporarily install one wedge at the top of the yoke. (Fig. B-7, 8, 9)
3. Rotate the front pair of tabs (four pole convergence magnet) as a unit to minimize the separation of the red and blue lines around the center of the screen. To adjust the convergence of red and blue, vary the angle between the tabs (Fig. B-5)
4. Rotate the rear pair of tabs (six pole convergence magnets) as a unit to minimize the separation of the magenta (R/B) and green lines. (Fig. B-6)
5. Adjust the spacing of the rear tabs to converge the magenta and green lines.
6. Apply paint to fix six magnets.
(As to models equipped with a magnet locking ring, tighten it.)
7. Remove the wedge installed temporarily on the yoke.
8. Tilting the angle of the yoke up, down and sideways, and adjust the yoke so as to obtain the circumference convergence. (Fig. B-8, 9)
9. Insert wedges to the position as shown in Fig. B-10 to obtain the best circumference convergence.
10. Wedge has a backing of double sided adhesive tape. Therefore, tear off one side of adhesive tape, and fix the wedges.
11. White balance adjustment (Black & White tracking) can now be performed.

WHITE BALANCE ADJUSTMENT

(Black and White Tracking)

1. Display a monochrome pattern.
2. Set the RED and GREEN DRIVE VRs for their mechanical center.
3. Turn the RED, GREEN and BLUE CUT-OFF VRs and the SCREEN VR fully counterclockwise.
4. Display a horizontal line. (Select the CUT-OFF SERVICE SWITCH from N to S and a HORIZONTAL LINE will appear.)
5. Turn SCREEN VR slowly clockwise until a very faint horizontal line appears.
6. Turn the CUT-OFF VR of the color which has appeared first, clockwise by about 10° and then adjust the SCREEN VR again so that the color may shine faintly.
7. Turn the other color CUT-OFF VRs slowly clockwise until a reasonable white line appears.
8. Return the monochrome pattern. (When returning a monochrome pattern select the CUT-OFF SERVICE SWITCH from S to N and a monochrome pattern will appear.)
9. Adjust the RED and GREEN DRIVE VRs for best white highlights.

PARTS LIST**CAUTION**

- The parts marked \triangle are very important for the safety. When replacing these parts, be sure to use specified ones to secure the safety and performance.
- The module circuit board is supplied together with the assembly, but the parts which do not have the drawing in this Parts List, P. W. Board Ass'y and the Parts No. columns of which are filled with lines — . will not be supplied.
- As a rule, the resistors and capacitors which are indicated as shown in (NOTE 2) "HOW TO EXPRESS PARTS NUMBERS OF STANDARD PARTS" are not shown in the list of the parts on the board.
When ordering the service parts, confirm the resistance/rated power, capacitance/rated voltage, and type of the parts, then order by the part No. indicated according to (NOTE 2).

(NOTE 1) ABBREVIATIONS OF RESISTORS, CAPACITORS AND TOLERANCES

RESISTORS		CAPACITORS

C-13CL4/C-13WL4(US&CA) STANDARD CIRCUIT DIAGRAM

■NOTE ON USING CIRCUIT DIAGRAMS

1.SAFETY

The components identified by the ⚠ symbol and shading are critical for safety. For continued safety replace safety critical components only with manufactures recommended parts.

2.SPECIFIED VOLTAGE AND WAVEFORM VALUES

The voltage and waveform values have been measured under the following conditions.

- (1)Input signal :Color bar signal
 - (2)Setting positions of each knob/button and variable resistor :Original setting position when shipped
 - (3)Internal resistance of tester :DC 20kΩ/V
 - (4)Oscilloscope sweeping time :H ⇒20μS/div
:V ⇒5mS/div
:Others ⇒ Sweeping time is specified
 - (5)Voltage values :All DC voltage values
- * Since the voltage values of signal circuit vary to some extent according to adjustments, use them as reference values.

3.INDICATION OF PARTS SYMBOL[EXAMPLE]

- In the P.C.board :R1209→R209

4.INDICATIONS ON THE CIRCUIT DIAGRAM

(1)Resistors

- Resistance value
 - No unit :[Ω]
 - K :[KΩ]
 - M :[MΩ]
- Rated allowable power
 - No indication :1/6[W]
 - Others :As specified
- Type
 - No indication :Carbon resistor
 - OMR :Oxide metal film resistor
 - MFR :Metal film resistor
 - MPR :Metal plate resistor
 - UNFR :Uninflammable resistor
 - FR :Fusible resistor

* Composition resistor 1/2 [W] is specified as 1/2S or Comp.

(2)Capacitors

- Capacitance value
 - 1or higher :[pF]
 - less than 1 :[μF]
- Withstand voltage
 - No indication :DC50[V]
 - Others :DC withstand voltage[V]
 - AC indicated :AC withstand voltage[V]
- * Electrolytic Capacitors
47/50[Example]:Capacitance value[μF]/withstand voltage[V]

- Type
 - No indication :Ceramic capacitor
 - MY :Mylar capacitor
 - MM :Metalized mylar capacitor
 - PP :Polypropylene capacitor
 - MPP :Metalized polypropylene capacitor
 - MF :Metalized film capacitor
 - TF :Thin film capacitor
 - BP :Bipolar electrolytic capacitor
 - TAN :Tantalum capacitor

(3)Coils

- No unit :[μH]
- Others :As specified

(4)Power Supply

-  :B1(129.3V)
-  :B2(12V)
-  :9V
-  :5V

* Respective voltage values are indicated.

(5)Test Point

-  : Test point
-  : Only test point display

(6)Connecting method

-  : Connector
-  : Board in connector
-  : Wrapping or soldering
-  : Receptacle

(7)Ground symbol

-  : LIVE side ground
-  : NEUTRAL side ground
-  : EARTH ground
-  : DIGITAL ground

5.NOTE FOR REPAIRING SERVICE

USE ISOLATION TRANSFORMER BECAUSE THIS PRODUCT IS A HOT CHASSIS !

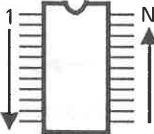

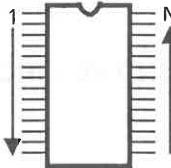

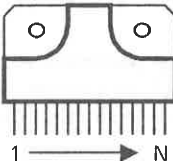

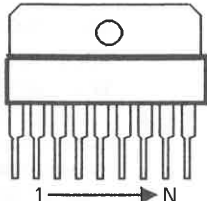

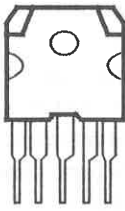

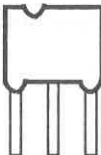

Whenever any service on this product is performed, AC power of the product should be supplied through an adequate capacity isolation transformer whose power supply cord is connected to the wall outlet.

If the above precaution is not respected, an electric shock may be caused when you touched the chassis with the hand.

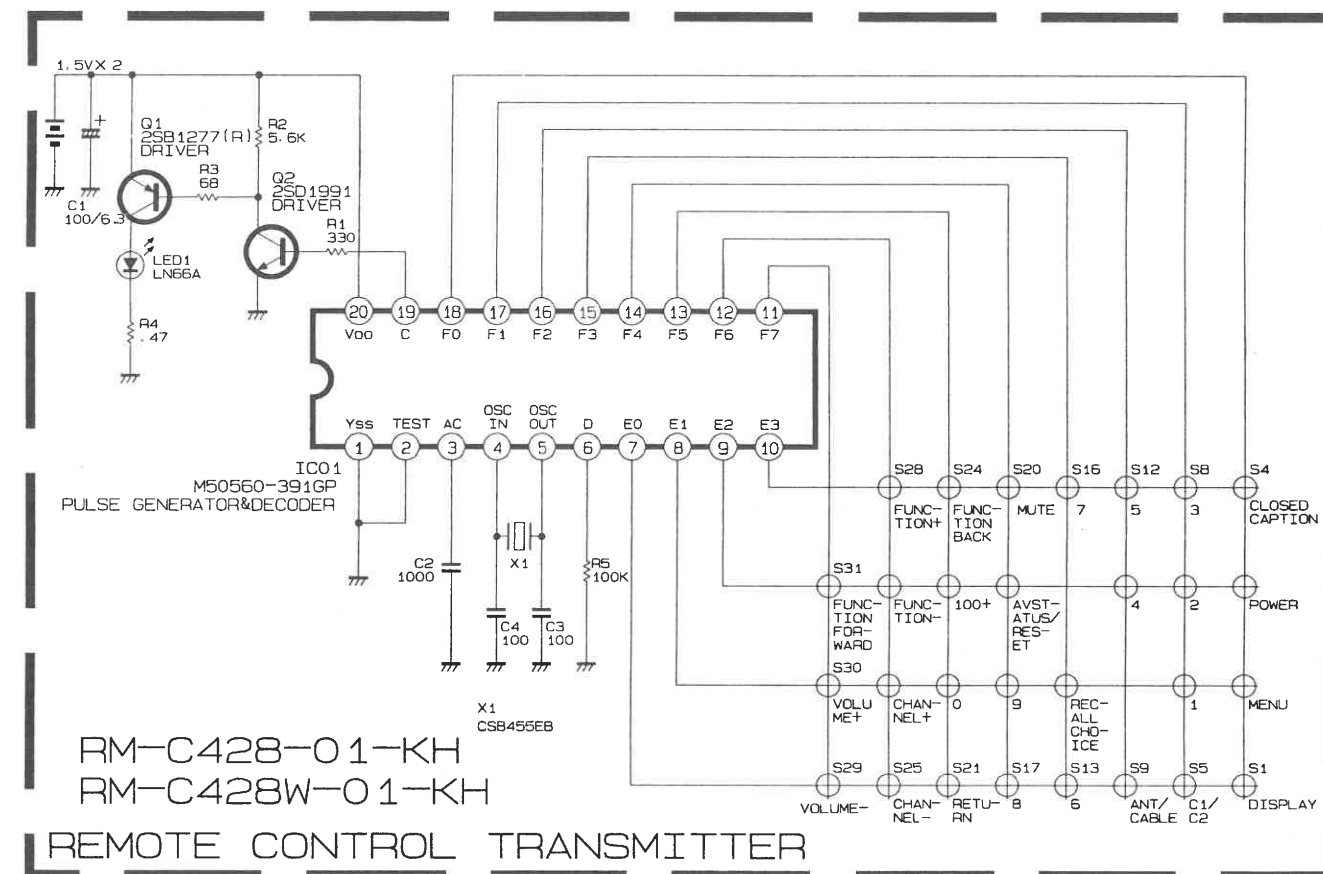

◇ Since the circuit diagram is a standard one, the circuit and circuit constants may be subject to change for improvement without any notice.
